

Create Claude Skills - Templates

#1 Method Template

Claude Chat Request

Review the [document_name] document I attached for you

Transform it into a reusable Claude Skill that can [purpose].

**** NOTES ****

- Before you begin, check if all necessary brand context files have been included. If any key details are missing, pause and ask the user specific, concise questions before continuing.
- Strictly adhere to the step-by-step process outlined in the document.
- Maintain consistency in naming conventions, tone, formatting style, and directory structure.
- Store the completed skill inside the /claude/skills/ folder, properly formatted and ready to deploy.
- Use the skill-creator skill to guarantee correct structure and formatting.

#2 Method Template

Claude Chat Request

Create a custom Claude skill called "[skill-name]".

What This Skill Does

[Describe the skill's purpose in 1–2 sentences. What problem does it solve? What does it produce?]

Trigger Conditions

This skill should activate when the user:

- [Trigger phrase or context #1]
- [Trigger phrase or context #2]
- [Trigger phrase or context #3]

Core Behavior

Step-by-step, this skill should:

1. [First thing Claude does]
2. [Second thing Claude does]
3. [Third thing Claude does – continue as needed]

Input It Accepts

- [What the user provides – e.g. text, file, URL, data]

```

- [Any optional inputs or flags]

## Output It Produces
- [What the skill outputs – e.g. file type, format, content]
- [Any naming conventions or structure to follow]

## Default Style / Settings (if applicable)
- [Visual style, tone, format, or any opinionated defaults]
- [e.g. "Professional tone", "Use monospace code blocks", "Save as .pdf"]

## Dependencies / MCP Tools Required (if any)
- [Tool name] – [what it's used for]
- If [tool] is not available: inform the user and provide setup instructions. Do NOT attempt to run the skill without it.

## Example Input → Output
Input: "[example of what a user would type or provide]"
Expected Output: "[brief description or snippet of what Claude should produce]"

** NOTES **

- Before you begin, check if all required tools or dependencies are available.
  If anything is missing, pause and ask the user before continuing.
- Use the skill-creator skill to guarantee correct SKILL.md structure and formatting.
- Maintain consistency in naming conventions, tone, and directory structure.
- Store the completed skill inside the .claude/skills/[skill-name]/ folder, properly formatted and ready to deploy.
- The skill must be fully usable immediately after saving.

```
