

LESSON PROMPTS

Brew & Co Project

Part 1: Building the Website

All Prompts — Ready to Copy & Paste

Every prompt used to build the website, organized by stage

What's Inside:

Stage 1

Design System & Planning

Stage 2

Building the Website

Stage 3

Image Optimisation

Stage 4

Deployment to GitHub & Vercel

7 prompts | Ready to use

by AI Agents Accelerator

Your free student resource

How to Use This Guide

This PDF contains every prompt used in the Brew & Co website building lesson, organized by stage. Each prompt is ready to copy and paste — just customise any business-specific details for your own project.

All prompts are for Claude Code

Every prompt in this guide is pasted directly into Claude Code in your terminal.

Planning Mode prompts

Prompts marked with "Planning Mode" should be sent after pressing Shift+Tab to switch to planning mode.

Customise for your project

The business details (name, location, menu items) are examples — swap them out for your own client or business.

DESIGN SYSTEM

Design System & Planning

01 Create a Design System from References

USE IN: Claude Code (Terminal)

Before building anything, you need a consistent design language. First, create a docs/design/references folder in your project and paste in one or more screenshot images of designs you like (e.g. from Dribbble). Then use this prompt to generate a complete design system.

■ COPY-PASTE THIS PROMPT:

```
Please look through the codebase and the reference images in the docs/design/references folder. Create a complete design system in docs/design with a style guide, design tokens, and component specs that match our tech stack. Use the front-end design skill to help with this.
```

02 Create a Design Enforcer Sub-Agent

USE IN: Claude Code (Terminal) — `/agents` command

After creating your design system, set up a sub-agent that can review and fix designs against the system. Run `/agents` in Claude Code, create a new agent at the project level, and use this description to generate the system prompt.

■ COPY-PASTE THIS PROMPT:

```
Call this agent design enforcer. This agent is responsible for making sure the application follows the correct design system. It should always reference the design documents in the docs/design folder. If it's asked to review the design, it should give detailed feedback back to the main agent. If it's asked to review and fix the design, it can make edits to the code itself.
```

03 Plan the Website

USE IN: Claude Code (Terminal) — `Planning Mode (Shift+Tab)`

Switch to planning mode (`Shift+Tab`) before sending this. Claude Code will analyse your project, design references, and CSV file, then create a detailed implementation plan. Review the plan before approving it. Customise the business details to match your own project.

■ COPY-PASTE THIS PROMPT:

```
Please help us plan a website for a coffee shop called Brew and Co. This is a cosy neighbourhood coffee shop located in Brooklyn that specialises in specialty coffee, fresh pastries, and light lunches. They also host events like open mic nights every Friday evening and coffee tasting sessions on Saturday mornings.
```

```
I want the website to have three pages. The homepage should feature the most popular menu items and have a beautiful hero section with a background image. The homepage should also show upcoming events. There should be a reserve a table button that opens a form where the user can enter their name, party size, and preferred date and time.
```

```
I also want an about us page with a story about the founders – you can make up the names and the story, just make it feel authentic and warm.
```

```
And then I want a menu page that shows all the items from our menu CSV file. I want this menu page to feel like you're browsing through an actual coffee shop menu – something with nice categories and images for each item.
```

```
For all of the images in the website, please use stock images from sites like Pexels.
```

BUILD

Building the Website

04 Approve & Build

USE IN: Claude Code (Terminal)

Once you've reviewed the plan and you're happy with it, clear the context, switch to auto-accept mode, and tell Claude Code to build it. This is going to take a few minutes — Claude will create all pages, components, and styling.

■ COPY-PASTE THIS PROMPT:

```
Yes, I'm happy with this plan. Please go ahead and implement it.
```

IMAGES

Image Optimisation

05 Create an Image Optimisation Skill

USE IN: Claude Code (Terminal) — Planning Mode (Shift+Tab)

Instead of asking Claude to optimise images each time, create a reusable skill that can be applied to any project. Switch to planning mode (Shift+Tab) first. Claude will create the skill files in `.claude/skills`. After creating the skill, exit Claude Code (`/exit`) and restart it so the new skill is loaded.

■ COPY-PASTE THIS PROMPT:

```
I want you to create a new Claude Code skill. This skill should be able to download an image from a URL, resize it for use on a website, and convert it to webp format. We'll use this skill to download all the stock images from sites like Pexels and optimise them for our application. The final webp files should be stored in the public folder so we can serve them locally instead of making requests to external services.
```

06 Use the Image Optimisation Skill

USE IN: Claude Code (Terminal)

After restarting Claude Code (so it picks up the new skill), use this prompt to download and optimise every image in the project. Claude will replace all external URLs with local webp files.

■ COPY-PASTE THIS PROMPT:

```
Hey, please use your image optimisation skill to download all of the stock images used in this application. Resize them for web use and convert them to webp format. Store them in the public folder. Then update all of the image references in the code to use these local versions instead of the external URLs.
```

Deployment to GitHub & Vercel

07 Commit & Push to GitHub

USE IN: Claude Code (Terminal)

Once the website is ready and images are optimised, commit everything and push to GitHub. After this, go to vercel.com, import the repository, and deploy — Vercel will handle everything automatically.

■ COPY-PASTE THIS PROMPT:

```
Please commit all the current changes with a clear message and push everything to GitHub as a public repository.
```

Quick Reference

#	Prompt	Mode	When
01	Create Design System	Normal	After adding reference images
02	Design Enforcer Agent	/agents	After design system is created
03	Plan the Website	Planning	Before building anything
04	Approve & Build	Normal	After reviewing the plan
05	Image Optimisation Skill	Planning	After website is built
06	Use Image Skill	Normal	After restarting Claude Code
07	Commit & Push	Normal	When website is ready

Happy building!

Damian & Krystian
