

LESSON PROMPTS

Plan Mode & Financial Tracker

All Prompts — Ready to Copy & Paste

Every prompt used in this lesson, organized by stage

What's Inside:

Stage 1 Planning — Describe the Project

Stage 2 Build — Start Implementation

Stage 3 Test & Fix — Report Bugs

Stage 4 Review — Deep Dive Agents

Also Covered in This Lesson:

- Switching modes with Shift + Tab
- Enabling thinking mode via /config
- Running Claude Code with --dangerously-skip-permissions
- Viewing background tasks and the to-do list
- Dragging files and images into Claude Code

5 prompts | Ready to use

How to Use This Guide

This PDF contains every prompt used in the Plan Mode lesson, organized by stage. Each prompt is ready to copy and paste into Claude Code.

Claude Code Modes (switch with Shift + Tab):

Plan Mode — Claude reads your code but makes no changes. Use this for planning and reviewing.

Accept Edits Mode — Claude creates and edits files automatically. Use this when you're ready to build.

Ask Before Edits — Claude asks permission before every change. This is the default mode.

PLANNING

Planning — Describe the Project

01 Describe the Project in Plan Mode

MODE: PLAN MODE

Switch to Plan Mode first (Shift + Tab until you see "plan mode" at the bottom). Then paste this prompt. Claude will read your project folder, ask clarifying questions, and create a full implementation plan — without writing any code yet.

■ COPY-PASTE THIS PROMPT:

```
Hey, I'd like to build a personal budget tracker app. Users should be able to add their income and expenses with categories like food, rent, transport, entertainment and so on. I want a dashboard that shows the total income, total expenses and the remaining balance. It would also be great to have a simple chart that shows spending by category so users can see where their money is going.
```

BUILD

Build — Start Implementation

02 Start the Build from the Plan

MODE: ACCEPT EDITS MODE

After reviewing and approving the implementation plan, switch to Accept Edits mode (Shift + Tab) and use this prompt. Claude will start building the entire project based on the plan it created.

■ COPY-PASTE THIS PROMPT:

```
I really like this plan. Please go ahead and implement it.
```

TEST & FIX

Test & Fix — Report Bugs

03 Report a Bug After Testing

MODE: ACCEPT EDITS MODE

After testing the app in your browser, describe any issues you find in plain English. Claude will locate the problem in the code and fix it. This is an example — adapt the description to whatever issue you encounter.

■ COPY-PASTE THIS PROMPT:

```
Hey, I just tested the app and I noticed that the spending chart doesn't update when I add a new expense. It only shows the correct data after I refresh the page. Can you fix this so the chart updates automatically whenever a new transaction is added?
```

REVIEW

Review — Deep Dive Agents

04 Run Deep Dive Agents to Review Code

MODE: PLAN MODE (2ND SESSION)

Open a second Claude Code session in a new terminal window. Switch to Plan Mode, then drag the implementation plan file into the conversation and use this prompt. Claude will spin up three background agents that each review a different part of the codebase independently.

■ COPY-PASTE THIS PROMPT:

```
Hey, please can you use three deep dive agents to review the implementation and make sure everything is actually complete and that there aren't any bugs or major gaps in the code.
```

Bonus: Skip Permissions Mode

Once you're comfortable with Claude Code and you trust what it's doing, you can restart it in a mode that skips all permission prompts. This saves time but means Claude won't ask before running commands.

Terminal command:

```
claude --dangerously-skip-permissions
```

Not recommended for beginners. Keep permission checks on while you're learning so you can see what Claude is doing at each step.

Keyboard Shortcuts & Commands

Shortcut	What It Does
Shift + Tab	Cycle between modes: Ask Before Edits → Accept Edits → Plan Mode
Ctrl + T	Show/hide the to-do progress list during a build
Alt + T (Windows)	Toggle thinking mode on/off
/config	Open settings — check or enable thinking mode
/plan	View the location of the saved implementation plan file
Escape	Return to the main conversation from a background task
Down Arrow → Enter	View currently running background tasks

The Plan Mode Workflow

1. **Switch to Plan Mode** — Shift + Tab until you see "plan mode"
2. **Describe your project** — Claude asks clarifying questions and creates a plan
3. **Review the plan** — Check that all your features are included
4. **Switch to Accept Edits Mode** — Shift + Tab to cycle to "accept edits"
5. **Tell Claude to build** — Claude implements everything from the plan

6. Test in your browser — Find issues and report them in plain English

7. Run deep dive agents — Open a 2nd session to review the code

8. Fix any issues found — Tell Claude to fix the critical bugs

Happy building!

Damian & Krystian
